APPLICATION RATES AND TIMING

APPLES: Repeat applications of 3-4L/ha applied from 4-5 weeks after petal fall up to one month before harvest. Water rate: Minimum 500L/ha. Up to 5 applications 3-4L/ha applied 10-14 days apart from 4 weeks after petal fall to 4 weeks prior to harvest with a minimum water rate of 500L/ha.

NOTE: RUTEC APPCAL 400 may leave a white residue on the fruit. This should be easily removed if an acid wash is used prior to waxing. It is advised however that sprays are not applied later than one month prior to harvest.
